                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 17, Application US/08985162
Patent No. 6057156
GENERAL INFORMATION:
APPLICANT: Akhtar, Saghir
APPLICANT: Fell, Patricia
APPLICANT: McSwiggen, James
TITLE OF INVENTION: ENZYMATIC NUCLEIC ACID TREATMENT
TITLE OF INVENTION: OF DISEASES OR CONDITIONS RELATED
TITLE OF INVENTION: TO LEVELS OF EPIDERMAL GROWTH
TITLE OF INVENTION: PACTOR RECEPTORS
METHODS AND COMPOSITIONS FOR
TREATMENT OF RESTENOSIS AND
CANCER USING RIBOZYMES
                                                                                                                                                                                                                                                                                                                                       COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5" Diskette, 1.44 Mb
MEDIUM TYPE: storage
COMPUTER: IBM Compatible
OPERATING SYSTEM: IBM P.C. DOS 5.0
SOFTWARE: MAND PETECT 5.1
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/435,628
FILING DATE: 05-MAY-1995
CLASSIFICATION: 514
PRIOR APPLICATION DATA:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2548, Application US/08585684B

Patent No. 5877021

GENERAL INFORMATION:
APPLICANT: Stinchcomb, Daniel T.
APPLICANT: MICHORAL JAMES
TITLE OF INVENTION: METHOD AND REAGENT FOR THE
TITLE OF INVENTION: METHOD AND REAGENT FOR THE
TITLE OF INVENTION: INDUCTION OF GRAFT TOLERANCE
TITLE OF INVENTION: AND REVERSAL OF IMMUNE RESPONSES
NUMBER OF SEQUENCES: 2751
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
STREET: 633 West Fifth Street
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1.0%; Score 13.8; D

Application US/08702105A

Sequence 33. Application US/08702105A

Patent No. 5908839

GENERAL INFORMATION

APPLICANT: Levitt, Roy C.

APPLICANT: Maloy, W. Lee

APPLICANT: Maloy, W. Lee

APPLICANT: Nicolaides, Nicholaides, Nicholaides, Nicholaides, Nicholaides, TITLE OF INVENTION: Treating Acopic Allergies Including Asthma And Related

TITLE OF INVENTION: Treating Acopic Allergies Including Asthma And Related

TITLE OF INVENTION: Disorders

NUMBER OF SEQUENCES: 41

CORRESPONDENCE ADDRESS:

ADDRESSEE: Finnegan, Henderson, Farabow, Garrett & ADDRESSEE: Dunner L.L.P.

STREET: 1300 I Street N.W., Suite 700

CITY: Washington
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0

FILING DATE: 12-MOG-1994
PRIOR APPLICATION DATA:
APPLICATION NUMBER: US 07/741,940
FILING DATE: 08-MG-1991
ATTORNEY/AGENT INFORMATION:
NAME: Kagan, Sarah A.
REGISTRATION NUMBER: 1107.49964
FELECOMMUNICATION INFORMATION:
TELECOMMUNICATION OF $20.508-9100
TELECOMMUNICATION OF $20.508-9299
INFORMATION FOR SEQ ID NO: 49:
SEQUENCE CHARACTERISTICS:
LENGTH: 19 base pairs
TYPE: nucleic acid
TYPE: nucleic acid

Patent No. 5877397
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Transgenic No. 5877397-Human Animals for TITLE OF INVENTION: Producing Heterologous Antibodies
NUMBER OF SEQUENCES: 150
CORRESPONDENCE ADDRESS:
ADDRESSEE: William M. Smith
STREET: One Market Plaza, Steuart Tower, Suite 2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1.0%; Score 13.4; DB 1; Length 19; 93.3%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                       Sequence 3, Application US/07759841C

Patent No. 5518796

GENERAL INFORMATION:

TITLE OF INVENTION: No. 5618796el Metal Binding Agents, and TITLE OF INVENTION: Methods and Compositions for Their TITLE OF INVENTION: Use to Treat Metal Toxicity

NUMBER OF SEQUENCES: 3

CORRESPONDENCE ADDRESS:

ADDRESSEE: John P. Ployd, Esq.

STREET: P.O. Box 3609

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2983. Application US/08584040

| Patent No. 6346398
| GENERAL INFORMATION |
| APPLICANT: Pavco, Pamela |
| APPLICANT: Bacched, Dan T. |
| APPLICANT: Stinchcomb, Dan T. |
| TITLE OF INVENTION: TREATMENT OF DISEASES OR |
| TITLE OF INVENTION: CONDITIONS RELATED TO LEVELS |
| TITLE OF INVENTION: GROWTH FACTOR |
| NUMBER OF SEQUENCES: 8502 |
| CORRESPONDENCE ADDRESS: ADDRESS: ADDRESSE: LYON & LYON |
| STREET: SJA West Fifth Street |
| SJA West Fifth Stree
                                   APPLICANT: Ilya, Chumakov
APPLICANT: Bougueleret, Lydie
TITE OF INVENTION: Prostate cancer gene
FILE REFERENCE: GENSET.018CP1
CURRENT APPLICATION NUMBER: US/09/218,207
CURRENT FILING DATE: 1998-12-22
EARLIER APPLICATION NUMBER: 08/996,306
EARLIER FILING DATE: 1997-12-22
EARLIER FILING DATE: 1998-09-09
NUMBER OF SEQ ID NOS: 578

Sequence 23, Application US/08250740
Patent No. 5686240
GENERAL INFORMATION:
APPLICANT: Schuchman, Edward H.
APPLICANT: Desnick, Robert J.
TITLE OF INVENTION: Acid Sphingomyelinase Gene and Diagnosis
TITLE OF INVENTION: Of Niemann-Pick Disease
NUMBER OF SEQUENCES: 36
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                    Score 13; DB 1; Length 17;

Patent No. 5834183

GENERAL INFORMATION:

APPLICANT: Orr, Harry T.

APPLICANT: Chung, Ming-yi

APPLICANT: Chung, Ming-yi

TILLE OF INVENTION: Gene Sequence for Spinocerebellar Ataxia

TILLE OF INVENTION: Type 1 and Method for Diagnosis

NUMBER OF SEQUENCES:

CORRESPONDENCE ADDRESS:

ADDRESSEE: Mueting, Raasch, Gebhardt & Schwappach, P.A.

STREET: P.O. Box 581415

SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/469,802B
FILING DATE: 06-JUN-1995
CLASSTPICATION: 435
ATTORNEY AGENT INFORMATION:
NAME: Mueting, Ann M.
REGISTRATION NUMBER: 110.00030101
TELECOMMUNICATION INFORMATION:
TELEBRANCE, DOS-1225
INFORMATION FOR SEQ ID NO: 13:
SEQUENCE CHARACTERISTICS:
LENGTH: 18 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          STATE: MN
